

CONTINENTAL
FIRES

Continental Fires

Undoubtedly you will be familiar with Continental Fires Ltd, the experienced supplier of a complete range of contemporary fires. We are therefore proud to announce that during the recent association with Barbas, our collection has been expanded to encompass an even wider range of wood and gas burning fires. Within this extensive range Barbas is one of the leading brands. Continental Fires Ltd is now in an even better position to supply just the right fireplace for the right situation - whether insert, built-in or free standing - in terms of both quality, appearance and function.

Barbas

Everyone can relax in the comfortable heat radiated by a Barbas fire. A nice fireplace is, therefore, something on many peoples wish list. They not only create comfort and a warm ambience: they can also represent a substantial saving in energy costs. A good fireplace can be a sound financial investment. Barbas is a brand with some thirty years experience in the production, development and sales of wood-burning and gas fires. Our fireplaces are reliable, pleasant and exceptionally functional. Over past decades, Barbas has assumed a predominant position in the wood-burning/gas fire market. Our experts have substantial experience and are up-to-speed with the latest technical developments. Continuing product research has borne the fruit of specialist knowledge and a distinct image. The fundamental aspect of this research is always the customers' wishes. Continental Fires and Barbas believe in a high level of service to their customers. This means that you can count on the best in technical support and accurate documentation. Our specialists listen to the market at all times and act quickly on what they hear. We are therefore able to offer you a continuous line of innovative products that fit into all surroundings. Barbas has developed a comprehensive, classic range of wood-burning/gas fires in collaboration with architects and designers. The variety of fireplaces includes hole-in-the-wall, existing open fireplace and freestanding products that provide untold possibilities in terms of interior design, both modern and traditional. Thirty years of quality manufacturing and design have resulted in a widespread European network of specialised associates. Reliability, service and expertise are factors that link all our associates and it goes without saying that we would be glad to help you choose your ideal fireplace.

GAS FIRES - BUILT IN

Gas fires - built in

Barbas offers you a wide range of gas fires. All of the Barbas built in fires work on the closed combustion principle. As safety is our priority, all appliances are certified to the latest European standards. A high-quality convection housing provides natural air circulation. The convection output of the fitted fireplace may be increased with the addition of a fan system. This system transfers warm air to your home faster and ensures quicker and more even heat distribution throughout the heated area.

GAS FIRES INSERTS

Gas fires inserts - to fit an existing hearth

Barbas has the answer for customers who want to replace their open fireplace with a gas fire - an insert which can be fitted into just such a space. The existing hearth can often remain intact as the new gas fire can be fitted in situ. All the customer needs is an available gas supply. Such fireplaces are a frequent choice even in new homes. Unlike balanced flue gas fires, gas inserts for existing hearths work on the open combustion principle.

GAS STOVES

Gas stoves - where no hearth is available

If you have no hearth or space for a fitted fireplace and nonetheless want the convenience of a gas fire, Barbas offers you a selection of models. Whether your taste is classical or modern, Barbas has a stove to suit each and every interior. These Barbas stoves have a double-walled convection air cavity. The effect of this system is that the air volume can be warmed up quickly. The product range contains models made of steel or soap stone. There are also models available which work on the open combustion principle as well as those which are closed.

WOOD BURNING FIRES - BUILT IN

Wood burning fires - built in

If you have decided to build an opening to house a new fitted fireplace, you will probably know that there are countless options. We will gladly advise you which option is the best for you. With your help, we can decide where the fireplace's flue connections will be. We can also tailor the product to the precise situation in your home. Barbas can provide you with a number of options, but you will remain in control of the design of your fireplace at all times. In this way, your product will be in perfect harmony with your personal wishes.

MULTI-FUEL FIRE INSERTS

Multi-fuel fire inserts

When designing fire inserts to fit an existing hearth, Barbas had two assumptions. The first of these was the demand for an alternative for the traditional open hearth. The customer was also reportedly looking for a fireplace with a high output. Barbas inserts which fit into an existing hearth unite the ambience of an open hearth and the output of an energy-efficient stove in one product. As with all Barbas stoves, all Barbas inserts have a double-wall convection system. This system draws in air from below, heats it in the double-wall cavity and radiates the warm air evenly throughout the heated area.

MULTI-FUEL STOVES

Multi-fuel stoves

Barbas offers a wide range of freestanding stoves. The models vary from classical to traditional and from austere to modern. Regardless of the model you choose, each Barbas fireplace brings comfort and warmth to your home. Naturally, all Barbas freestanding stoves have the double-wall convection system. The heated area is thus warmed up quickly. Only the best materials are good enough.

Soap stone

Many models have soap-stone cladding. Soap stone stores the heat and emits it evenly to the surrounding area over a long period.
